

Viewing recommendation data (Frosmo Control Panel)

You can view the latest data generated for a [recommendation configuration](#) in the Frosmo Control Panel. The data is in the JSON format.

To view the data for a recommendation configuration:

1. In the Control Panel, select **Data Management > Recommendations > Configurations**.
2. In the recommendation configurations list, find the configuration whose data you want to view, click the quick menu button for the configuration, and select **Preview**.

The full recommendation data opens in a new tab. The data is retrieved with the [Recommendations API](#).

3. Depending on the recommendation type:
 - `bundle_viewed`, `bundle_converted`, or `bundle_viewed_converted`: To filter the data based on the target product attribute, enter a value for the attribute in the request URL. For example, if the target attribute is product ID, enter a specific product ID to view the recommended products for that particular product.

```
&recos=[{"name":"Products%20purchased%20together","params":{"productId":""}}
```

```
&recos=[{"name":"Products%20purchased%20together","params":{"productId":"123"}}]
```

- `most_viewed` or `most_converted`: If you've defined request parameters in the recommendation configuration, optionally filter the results by entering values for those parameters in the request URL.

```
&recos=[{"name":"Most%20purchased%20products","params":{"type":""}}
```

```
&recos=[{"name":"Most%20purchased%20products","params":{"type":"Books"}}]
```
