

# Using a template in a modification

When you set a [modification variation](#) to use a [template](#), the variation does not define its own content but instead receives its content from the template. Any changes to the template also affect the variation.

To use a template in a modification:

1. In the Frosmo Control Panel, in the sidebar, select **Modifications**.
2. In the modifications list, find and open the modification in which you want to use the template, or create a new modification. For more information, see [Creating and editing a modification](#).
3. In the **Content** section, open the variation in which you want to use the template, or add a new variation.
4. In the variation settings, click **Select type**.
5. In the **Content templates** list, select the template you want to use.

The screenshot shows a list of content templates. At the top, there are two radio button options: 'Custom content' (with the description 'Define your own CSS, HTML, and JavaScript content in a content editor.') and 'Original content' (with the description 'Create a variation to track the original page content.'). Below these is a section titled 'Content templates' with a downward arrow. Under this section, there are three radio button options: 'Hero banner' (which is selected and highlighted with an orange border), 'Recommendation slider', and 'Subscription button'.

6. Click **Select**.
7. In the **Content options** section, define the content options, if any. The selection of options is based on the content options schema in the template. The following example shows a content options UI with a single option for setting a mandatory string label.

The screenshot shows a 'Content options' section. It has a title 'Title\*' followed by a text input field containing 'Welcome to Frosmo!'. Below that is a 'Background color' section with a color picker showing a greyish-blue color. At the bottom, there is a section titled 'Content options object (JSON) >' which is currently collapsed.

To view the JSON object describing the full content options for the variation, expand the **Content options object (JSON)** section.

**Content options**

**Title\***

**Background color**

**Content options object (JSON) v**

```
{
  "bannerBackgroundColor": "#b4b4b4",
  "bannerTitle": "Welcome to Frosmo!"
}
```

8. When you're done, click **Save**.
