

Checking where a placement is used

To check in which modifications a placement is currently used:

1. In the Frosmo Control Panel, select **Modifications > Placements**.
2. In the placements list, find the placement whose usage you want to check, and click the placement name.
3. Check the placement usage in the right-hand panel. The panel lists the modifications that currently use the placement grouped according to modification status (active, upcoming, past, inactive, invalid). You can access the settings of a modification by clicking the modification name.

The screenshot displays a form for a placement named "Multipage - Site Banner". The form includes a description "Global banner for the site" and a target element selector set to "#header". To the right, a panel titled "Used in the following modifications:" lists modifications grouped by status: Active (Frosmo Banner 1), Upcoming (Frosmo Banner 2), Past (Site Banner), and Inactive (Site Logo, Logo Test). The "Active" and "Upcoming" sections are highlighted with an orange border.

Name*	Used in the following modifications:
Multipage - Site Banner	Active Frosmo Banner 1
Description	Upcoming Frosmo Banner 2
Global banner for the site	Past Site Banner
Target element*	Inactive Site Logo Logo Test
Enter the selector for the web page element or elements in relation to which the modification content is to be placed in the page code. Learn more	
CSS selector <input type="text" value="#header"/>	

4. When you're done, click **Cancel**.
