Getting Started

- About this documentation
- Introduction to the Frosmo Platform
    - Key features and concepts
- Preparing your site for the Frosmo Platform
    - Preparing your iGaming site
    - Preparing your retail site
    - Adding the Frosmo scripts to your site
    - Best practices for integration
- Getting started with the Frosmo Platform
    - Logging in to the Frosmo Control Panel
    - Introduction to the Frosmo Control Panel
    - Basic feature setup
    - Creating personalized content
        - Adding a recommendation to a new page
        - Adding filters to a recommendation
        - Creating and testing two recommendation variants
        - Targeting content to specific visitor segments
    - Previewing content and troubleshooting issues
- Next steps
    - Setting up system and service integrations
    - Setting up user accounts
- Further reading

Platform & Features

- Technical overview
- Security overview
- Features overview
    - Feature: Conversion definition
    - Feature: Custom action
    - Feature: Modification
    - Feature: Placement
    - Feature: Recommendation
        - Feature: Recommendation strategy
        - Feature: Recommendation configuration
    - Feature: Segmentation
    - Feature: Shared code
    - Feature: Super-Affinity
    - Feature: Template
    - Feature: Trigger
    - Feature: Workspace
- Platform policy
- Data collection and processing
    - Data collected from websites
    - Data storage and retention
    - Data tracking overview
    - Conversion attribution
    - Default configuration and data tracking for a visitor
    - Context and shared context
- Data protection and privacy
    - Data privacy description
    - Online privacy technologies and the Frosmo Platform
    - Visitor profiling
- System and service integrations
- Measuring and improving website performance
- Glossary

User Guides

- Planning visitor journeys
- Data tracking
  - Conversion definitions
    - Creating and editing a conversion definition
    - Activating and deactivating a conversion definition
    - Removing a conversion definition
  - Custom actions
    - Tracking custom actions
    - Creating and editing a custom action
    - Using a custom action with other features
- Development
  - Segmentation
    - Working with segments
      - Creating and editing a segment
      - Duplicating a segment
      - Removing a segment
      - Selecting and editing multiple segments
    - Working with segment groups
      - Adding a segment to a segment group
      - Editing a segment group
      - Removing a segment group
    - Segment examples
      - Example: Excluding visitors from a segment
      - Example: Segmenting visitors based on product views
      - Example: Segmenting returning customers
      - Example: Segmenting visitors based on landing page
      - Example: Segmenting visitors based on location
      - Example: Segmenting visitors based on traffic source
      - Example: Segmenting visitors based on search queries
  - Placements
    - Placement workflow
    - Creating and editing a placement
    - Duplicating a placement
    - Checking where a placement is used
    - Removing a placement
  - Modifications
    - Modification workflow
    - Creating and editing a modification
      - Defining targeting for a modification
      - Defining the placement for a modification
      - Defining the content for a modification
      - Defining the description for a modification
      - Defining the schedule for a modification
      - Defining advanced modification settings
      - Previewing the modification
      - Activating and deactivating the modification
    - Finding and sorting modifications
    - Renaming a modification
    - Duplicating a modification
    - Removing a modification
    - Selecting and editing multiple modifications
    - Using selective profiling
    - Migrating from template defaults to templates
    - Multi-armed bandit optimization
  - Templates
    - Enabling and disabling templates for a site
    - Template workflow
    - Creating and editing a template
    - Using a template in a modification
    - Checking where a template is used
    - Removing a template
    - Example: Creating a hero banner from a template
  - Triggers
    - Trigger workflow
    - Creating and editing a trigger
    - Duplicating a trigger
    - Removing a trigger
    - Trigger examples
      - Example: Segmenting visitors based on modification clicks
      - Example: Segmenting visitors based on their device type
      - Example: Segmenting visitors based on their IP address
      - Example: Displaying preloaded content based on the time and day
      - Example: Displaying content to visitors changing the shopping cart contents
      - Example: Using a trigger to register conversions
  - Recommendations
    - Creating recommendations
    - Recommendation strategy workflow
    - Creating and editing a recommendation strategy
    - Duplicating a recommendation strategy

            - Removing a recommendation strategy
            - Recommendation examples
                - Example: Recommending the most popular items on a site
                - Example: Recommending the most popular items based on visitor affinity
                - Example: Creating a new recommendation by duplicating a strategy and modification
        - Email recommendations
            - Email recommendation workflow
            - Creating and editing an email recommendation
                - Editing the item template of an email recommendation
            - Checking email recommendation performance
            - Regenerating an email recommendation
            - Renaming an email recommendation
            - Removing an email recommendation
            - Example: Recommending most viewed products in a marketing email
        - Workspaces
            - Development workflow with workspaces
            - Creating and managing workspaces
            - Developing features in workspaces
                - Entering a workspace
                - Developing modifications in a workspace
                - Developing placements in a workspace
                - Developing templates in a workspace
                - Developing triggers in a workspace
                - Developing shared code in a workspace
                - Adding custom code to a workspace
                - Previewing a workspace
                - Publishing a workspace
                - Updating the custom script for a workspace
            - Example: Developing a site banner in a workspace
- Integrations
    - Contentful
        - Introduction to Frosmo Segments for Contentful
        - Installing Frosmo Segments for Contentful
        - Adding a segment selector to a Contentful content type
        - Attaching segments to a Contentful entry
        - Displaying Contentful entries to segmented visitors
        - Example: Creating a segmented hero banner with Contentful
- Testing
    - Frosmo Preview
    - Test mode
    - Testing data tracking
    - Testing in incognito mode in Chrome
- Analytics
    - Conversion statistics
    - Modification statistics
        - Basic modification statistics
        - Advanced tracking statistics
- Troubleshooting
    - Checking site status
    - Checking user activity
    - Common problems and solutions
    - Console debugging with Frosmo Core
- Administration
    - Sites and users
        - Creating and managing sites
        - Managing your user settings
        - Creating and managing other users

Developer Guides

- APIs
    - Getting your site origin
    - Graniitti API
        - Getting started with the Graniitti API
        - Graniitti API usage
            - Graniitti API: Resources
            - Graniitti API: Requests
                - Graniitti API authentication
                - Managing Graniitti API results
                - Updating the custom script with the Graniitti API
            - Graniitti API: Responses
            - Graniitti API: Versioning
        - Graniitti API reference
        - Graniitti API changelog
    - Visitor API
        - Visitor API reference
- Connectors

    - React Connector
        - Introduction to the React Connector
        - Installing the React Connector
        - Using the FrosmoPlacement component
        - Creating placements and modifications for React
        - Example: Creating personalized content in React
- Data tracking
    - Frosmo data layer
        - Enabling and disabling the data layer
        - Tracking data with the data layer
        - Tracking data layer events
    - Tracking products with the data layer
    - Tracking transactions with the data layer
    - Tracking conversions with the data layer
    - Tracking custom actions with the data layer
    - Tracking custom events with advanced tracking
- Recommendations
    - Recommendation strategies
        - Retrieving recommendation data for strategies
        - Displaying a recommendation strategy selector
    - Recommendation configurations
        - Creating recommendations with recommendation configurations
        - Working with recommendation configurations (Frosmo Control Panel)
            - Creating and editing a recommendation configuration (Frosmo Control Panel)
            - Generating recommendation data (Frosmo Control Panel)
            - Viewing recommendation data (Frosmo Control Panel)
            - Checking the status of recommendation data generation (Frosmo Control Panel)
            - Removing a recommendation configuration (Frosmo Control Panel)
        - Working with recommendation configurations (Graniitti API)
            - Creating a recommendation configuration (Graniitti API)
            - Retrieving a recommendation configuration (Graniitti API)
            - Updating a recommendation configuration (Graniitti API)
            - Deleting a recommendation configuration (Graniitti API)
        - Recommendation configuration reference
    - Recommendations API
        - Recommendations API reference (strategies)
        - Recommendations API reference (configurations)
        - Recommendations API troubleshooting
    - Product API
        - Product API reference
    - Recommendation examples
        - Example: Recommending trending products in a category (strategy)
        - Example: Recommending products purchased together (configuration)
- Shared code
    - Shared code workflow
    - Creating and editing shared code
    - Activating and deactivating shared code
    - Removing shared code
    - Troubleshooting shared code
    - Example: Tracking products with shared code

Releases

- Release notes
    - Frosmo "Lost River" 2021-11-09
    - Frosmo "Kodiak" 2021-03-08
    - Older releases
        - Frosmo "Juneau" 2020-09-09
        - Frosmo "Iron Creek" 2020-05-25
        - Frosmo "Happy Valley" 2019-11-20
        - Frosmo "Goodnews Bay" 2019-05-06
        - Frosmo "Funny River" 2018-12-03
        - Frosmo "Elephant Point" 2018-08-20
        - Frosmo "Diamond Ridge" 2018-06-18
        - Frosmo "Coldfoot" 2018-04-23
        - Frosmo "Big Delta" 2018-03-19
        - Frosmo "Abyss Lake" 2018-01-15
        - Frosmo "Yucca Valley" 2017-11-20
        - Frosmo "Xanadu" 2017-09-25
        - Frosmo "Watts" 2017-08-28
        - Frosmo "Venice" 2017-07-31
        - Frosmo "Upland" 2017-06-05
        - Frosmo "Tarzana" 2017-05-08
        - Frosmo "Skid Row" 2017-04-10
        - Frosmo "Rosemead" 2017-03-13
        - Frosmo "Quartz Hill" 2017-02-13
        - Frosmo "Palmdale" 2017-01-16

        - Frosmo "Old Bank" 2016-12-19
        - Frosmo "Northridge" 2016-11-28
        - Frosmo "Malibu" 2016-10-31
        - Frosmo "Lynwood" 2016-10-03
        - Frosmo "Koreatown" 2016-09-05
        - Frosmo "Jefferson Park" 2016-08-08
        - Frosmo "Inglewood" 2016-07-11
        - Frosmo "Hollywood" 2016-06-13
