

Selecting and editing multiple segments

The Frosmo Control Panel allows you to duplicate, group, and remove multiple segments simultaneously.

To manage multiple segments simultaneously:

1. In the Frosmo Control Panel, select **Data Management > Segmentation > Segments**.
2. At the top of the segments list, click **Select**.
3. Select the segments you want to manage. A menu bar appears at the top of the page.

4. In the menu bar:
 - To remove the selected segments, select **Remove**, and click **Remove**.
 - To duplicate the selected segments, select **Duplicate**, and click **Duplicate**.
 - To group the selected segments, select **Move to**. You can add the segments to an existing segment group or create a new group. For more information about grouping segments, see [Working with segment groups](#).
