

# Shared code workflow

To create and deploy a piece of [shared code](#):

1. [Create the shared code](#).
2. [Activate the shared code](#).

You can freely [edit the shared code](#) after creating it.

You can also [deactivate the shared code](#), which stops it from executing on the site, and [remove the shared code](#) when you no longer need it.

If you run into problems with shared code, see the [troubleshooting instructions](#).
