

# Working with recommendation configurations (Graniitti API)

You can create and manage [recommendation configurations](#) with the [Graniitti API](#).

To make a Graniitti API request, you need the following:

- [Personal access token](#)
- [Base URL for requests](#)
- [Site ID](#)

For more information, see [Graniitti API authentication](#) and [Graniitti API: Requests](#) in the Graniitti API guide.

You can use the Graniitti API to:

- [Create a recommendation configuration for a site.](#)
- [Retrieve one or all recommendation configurations for a site.](#)
- [Update a recommendation configuration for a site.](#)
- [Delete a recommendation configuration from a site.](#)

For the final recommendations displayed on a site, retrieve the recommendation data with the [Recommendations API](#).

You can also create and manage recommendation configurations in the [Frosmo Control Panel](#).
