

# Graniitti API: Versioning

The Graniitti API is a versioned API. The versioning scheme consists of a major version, which you set in the request URL.

```
https://graniitti.domain.name/v0/
```

 The actual domain name depends on your Frosmo Platform instance. To find out which domain name you need to use, see [Graniitti API: Requests](#).

The following table shows the current and supported versions of the API.

**Table: Current and supported Graniitti API versions**

|                    |   |
|--------------------|---|
| Current version    | 0 |
| Supported versions | 0 |
